Hispanic Parents Value and Are Satisfied with Healthy Options Offered by Afterschool Programs

Washington, DC — Afterschool programs serve 3.8 million Hispanic children, and 76 percent of Hispanic parents with a child in an afterschool program report being satisfied with the healthy food their child’s program offers. Similarly, 78 percent of Hispanic parents with a child in an afterschool program report that they are satisfied with the amount and variety of physical activity offered. These findings are from a national household survey conducted by Shugoll Research for the Afterschool Alliance. It found vast unmet need for afterschool programs among Hispanic families, with the parents of 5.5 million Hispanic children saying they would enroll their child, if an afterschool program were available.

The special report, *Kids on the Move: Afterschool Programs Promoting Healthy Eating and Physical Activity*, reveals parents’ views about the role afterschool programs play in improving kids’ health and physical fitness. Findings are based on responses collected for *America After 3PM* from 30,000 U.S. households, including in-depth interviews with more than 13,000 families, including 1,094 Hispanic families.

“Afterschool programs are a proven, but sometimes underappreciated, tool in the effort to prevent childhood obesity and physical inactivity,” said Afterschool Alliance Executive Director Jodi Grant. “We’ve known for a long time that afterschool, before-school and summer programs keep kids safe, inspire them to learn, and help working parents. These new data make clear that they also do a tremendous amount to help keep kids healthy, now and for the future. The healthy habits afterschool programs help instill in Hispanic – and all – children can last a lifetime.”

The new survey finds that many parents are unaware that standards for healthy eating and physical activity exist for afterschool programs. Nearly four in ten Hispanic parents are unaware of the recommended standards for healthy eating (34 percent are unaware) and physical activity (39 percent are unaware). The Healthy Eating and Physical Activity (HEPA) Standards recommend best practices related to food and activity, including at 30 minutes of morning or afterschool program time for physical activity (60 minutes for a full day program). The report recommends doing more to ensure that afterschool providers, as well as parents, are aware of the HEPA Standards. Many parents who report that their children have 30 minutes of physical activity each day in their program are satisfied with that, suggesting that parents believe afterschool programs play a key role in helping children meet the recommended 60 minutes of daily physical activity.

According to *Kids on the Move*:

Sixty-nine percent of Hispanic parents agree that afterschool programs should provide healthy food and beverage options for children, compared with 72 percent of white parents and 77 percent of African-American parents.

Two in three Hispanic parents (66 percent) and African-American parents (67 percent) of children in afterschool programs say that providing healthy food was an important factor in selecting an afterschool program, compared with 55 percent of white parents.

White and African-American parents were more likely than Hispanic parents to say that their child’s afterschool program serves snacks that include healthy foods (75 percent and 72 percent versus 63 percent).

More than eight in 10 Hispanic parents (82 percent) and African-American parents (82 percent) agree that afterschool programs should help children be physically active.

When asked about opportunities for physical activity, 71 percent of Hispanic parents and 71 percent of African-American parents report that it was very important when selecting their child’s afterschool program.

An overwhelming majority of Hispanic parents (84 percent) and African-American parents (82 percent) report that their child’s afterschool program does provide opportunities for physical activity.

“The afterschool community is committed to doing even more to stop childhood obesity,” Grant said. “Quality afterschool programs are a vital part of the fabric of our communities, providing a rich array of services children and families need. We must increase support for these programs from government at all levels, philanthropies, businesses and others if we are to help the next generation lead long, healthy lives and prepare children and youth to succeed in school and life.”

In October 2014, the Afterschool Alliance released findings from America After 3PM related to children’s participation in afterschool. That data revealed a dramatic increase in participation in afterschool over the past decade, from 6.5 million to 10.2 million children. The survey also documented a vast and growing unmet demand for afterschool, with the parents of 19.4 million children reporting that they would enroll their child in a program, if one were available. National and state-by-state results from that report and from this special report are available at www.afterschoolalliance.org/AA3PM/.

Findings from America After 3PM are based on in-depth interviews with 13,709 households with children, completed by way of an online survey using a blend of national consumer panels. Shugoll Research collected and analyzed the data for America After 3PM. In order to participate, respondents had to live in the United States and be the guardians of a school-age child living in their household. All interviews were completed between February 28 and April 17, 2014.

Kids on the Move is funded by the Robert Wood Johnson Foundation. America After 3PM is funded by the Charles Stewart Mott Foundation, the Robert Wood Johnson Foundation, The
Wallace Foundation, the Ford Foundation and the Noyce Foundation, with additional support from the Heinz Endowments, The Robert Bowne Foundation and the Samueli Foundation.
